

Baz Marie BSc (Hons) MCMi IPEM

Project Manager

Profile

Professional Experience:

Over 22 years of experience working in the healthcare profession, skilled in Clinical Governance and Medical Devices Management in the field of Bio-Medical Engineering. Baz is committed to the Department of Health's Patient Safety Agenda.

Summary

Baz, previously the Head of Clinical Governance in the NHS, has a sound and coherent understanding of governance issues in NHS organisations. In the current climate of accountability and litigation, there is no better time to address poor practice and stamp out unsafe ways of working, especially at a time where there are many support structures available to NHS organisations. Baz is accustomed to working with health care staff that provide patient care under ever-pressing workloads, as well as having to provide evidence of adherence to regulations. With his long and useful experience in governance and clinical technology, he has a proven capability of facilitating and promoting co-ordinated thinking, simplification, clarity of understanding and developing processes to minimise risk and improve efficiency.

With a Post-Graduate Certificate in Clinical Governance and a Certificate in Clinical Risk Management by the Institution of Occupational Safety & Health, Baz maintains his personal development by having attended many courses and lectures in Root Cause Analysis delivered by National Patient Safety Agency. Baz is wholly committed to patient safety and organised systems of safe working; Currently, Baz is studying for a BSI Diploma in Quality Management. Baz has led the development work at Southampton University Hospital Trust to its successful completion in achieving accreditation of British Standards Institute 9001:2000 for their Medical Equipment Management Service. He is a long standing member of the Chartered Management Institute and is presently a Committee member of the South East Branch. The Institute is dedicated to management and leadership – Committed to raising business performance by championing management.

Baz delivers medical equipment management solutions to a number of NHS Trusts; He consults in the many topical issues regarding medical devices including cost savings for maintenance contracts. He has recently saved over £330,000 for a London organisation. In his aim to infuse best practice within organisations, Baz provides manageable solutions to difficult regulatory demands and duties. Baz believes that for safer patient care when using medical devices, there must be clear lines of accountability and leadership, together with evidence of the actions and activities of the stakeholders.
